

INTERNATIONAL COPPER STUDY GROUP

Fabrication and Copper Use in Indian Subcontinent, ASEAN and Oceania: Capacity and Industrial Use of Refined Copper and Scrap in Indian Subcontinent, ASEAN and Oceania 2015

- This regional study completed in May 2015 covered over 3.75 million tonnes of copper and copper alloy semi-fabrication capacity in the region and a regional output reported of more than 2.65 kt for 2013.
- The plants included in the study covered the known capacity to process refined copper and scrap, added new capacities, added unreported capacities and included the most important regional users of refined and scrap copper.
- Reported fabrication output includes not only copper products such as copper wire rod and copper fabricated products including tube, sheet and rod, but also brass mill products including copper alloy tube, copper alloy sheet and copper alloy rod.
- Fabrication plants located in India, Thailand, Indonesia and Malaysia constitute close to 87% of total installed capacity and 85% of the output reported in the study.
- India is the main fabricator with over 1,113 kt of fabrication reported plant by plant and including copper alloys and copper products for 2013. Thailand reported output was over 413 Kt for the base year 2013, closely followed by Indonesia with 399 Kt, and Malaysia fabrication output was 343 kt. The rest of the region reported a significant 389 kt of fabricated output.
- This comprehensive 123 pages regional report includes a plant by plant database, a country by country discussion of recent industrial copper use trends, and a country by country database of copper scrap and copper alloy scrap trade in the region.
