

STATISTICAL YEARBOOK (annual)

The ICSG Statistical Yearbook includes annual statistics for the previous 10 years on copper mine production split by concentrate and SX-EW, smelter production split by primary (from concentrates) and secondary (from scrap), refined production split by primary (from concentrates), SX-EW and secondary (from scrap), copper semis production, refined copper usage. It also includes trade data for concentrates, blister/anodes, cathodes, ingots, scrap and semis, as well as trade matrixes by origin/destination and data for stocks and exchange prices, providing a global view of supply and demand. The Yearbook serves as a useful tool for consultations and analysis on the longer-term evolution of world copper production, usage, stocks and prices. Subscribers to the Copper Bulletin receive the Yearbook as part of their annual subscription.

The subscription price of only the Yearbook is €200 for subscriptions originating from institutions based in ICSG member countries* and €400 for subscriptions from non-ICSG member countries.

The Yearbook is available in PDF and Excel formats and can be downloaded from ICSG website.
