

ICSG ONLINE STATISTICAL DATABASE

The ICSG maintains one of the world's most complete historical and current databases with copper statistics for production, usage, trade, stocks and prices going back as far as the beginning of last century for some data series. The ICSG provides data since 1995 on its Online Statistical Database for subscribers but historical data prior to 1995 can be sold on demand (please contact the secretariat).

ICSG Online Statistical database is divided into two available models that subscribers may access depending on their current subscription: The *Capacity Analysis* model refers to the data contained in the ICSG Directory of Copper Mines, Smelters and Refineries and can only be subscribed by the Directory subscribers; the *Production Analysis* model refers to the data contained in the ICSG Copper Bulletin and can only be subscribed by the Bulletin subscribers. Inside each model, several “views” have been pre-set to extract data but users can create and save their own views suited to their analysis requests.

Subscriptions to the ICSG Online Statistical Database are only available to the subscribers of the ICSG Copper Bulletin or the ICSG Directory of Copper Mines and Plants (please see Order Form in the link at the top of this page). The subscription price is €200 for subscriptions originating from institutions based in ICSG member countries* and €300 for subscriptions from non-ICSG member countries.
